SC series

# THE NEW STANDARD FOR NOTE ACCEPTORS.

No matter what business you're in or where you operate, MEI CASHFLOW® SC series can make a difference to your customers, your performance and your profitability. From retail outlets to casinos, MEI CASHFLOW® SC series is the new standard in note acceptors.

Designed to perform optimally in three key areas, MEI CASHFLOW® SC series is equipped with industry-leading features and proven technology that mean the most to your business, because they make the most of your money. And, MEI CASHFLOW® SC series products can be supported for audit, download and configuration with MEI CASHFLOW® STS PC-based support tools.

## 1. Advanced Acceptance & Security

The design incorporates a unique recognition and processing system. The unit has higher overall acceptance rates for ALL notes, plus bar code recognition, thus eliminating consumer frustration. Features include:

- ▶ Proven Swiss recognition technology with a revolutionary illuminating "light bar" source providing six wavelengths of light.
- ▶ Lensed receivers that scan 300% more note surface.
- ▶ 100 Mhz Digital Signal Processor (DSP), using advanced recognition algorithms.
- ▶ Increased security and notes-per-minute acceptance.
- ▶ Highest ticket acceptance rates through DSP processing of a custom bar code sensor output.

## 2. Exceptional Note Handling

As the most advanced technology on the market, MEI CASHFLOW® SC series virtually eliminates early rejects by attempting to accept all notes. Key differences from other note acceptors are:

- ▶ New note transport system enables currency transaction in all conditions and decreases the risk of jams.
- ▶ Smooth short and tall note path is sealed against fluid and dust.
- ▶ Continuous gear-drive system has 16 rollers between the acceptor and cash-box, and transports and stacks notes into a locked, removable cash-box.
- ▶ Combines the note handling and the advanced note recognition system to increase acceptance rates and reduce jams.

## 3. Lower Cost of Ownership

The design features and functionality withstand tough conditions and still perform. Save money with a durable, secure note acceptor that lasts longer, increases uptime and requires fewer technician visits.

- ▶ Cash-box constructed of a durable, high-impact plastic, with a welded design.
- ▶ Curved exterior design protects internal mechanisms and drive gears and secures cash.
- ▶ Common acceptor module, regardless of the machine manufacturer.
- ▶ Inexpensive interface cards slide-mounted in the unit chassis provide custom electronic interfaces for current machines, while maintaining flexibility for the future.
- ▶ Soft failures are reduced by allowing cleaning at intervals four times longer than competitive products.

## In addition, the Product Offers Superior Ease of Use

- ▶ Acceptor detaches, opens and cleans easily.
- ▶ Traffic light LEDs provide front-line, at-machine diagnostics.
- ▶ USB port on the front allows convenient interface for support tools.
- ▶ Features a one-hand, ergonomic cash-box.
- ▶ No latches or levers on the cash-box.

The cash-box also features the first dispute resolution window to show the value area of the last note stacked in the cash-box, requiring no removal or opening. By viewing the actual note last fed, customers have solid proof and dispute resolution is expedited. And, equipment downtime is reduced.

## Quality, Reliability and Performance...

The new MEI CASHFLOW® SC series embodies MEI innovations and insight gained from building more than 3 million note acceptors. The result—dramatically improved customer satisfaction, measurably increased cash flow and significantly reduced operating costs around the world.

When MEI developed the first electronic note validator 30 years ago, it influenced payment systems in many major industries: Gaming, Retail & Vending and Parking & Transportation. Today, MEI electronic payment systems are relied upon for more than 1 billion transactions a week in 90 countries. MEI is considered the most reliable choice in hundreds of real-world applications and has earned the best performance reputation in the market.

## Gaming

Casinos worldwide are successfully reducing costs by implementing ticket in/ticket out (TITO) systems to improve consumer satisfaction and reduce costs.

MEI CASHFLOW® SC note acceptors provide the best acceptance of notes and tickets by aligning currency and coupons submitted at nearly any angle. And, through the optical recognition system, it readily converts consumer currency into gaming credits.

MEI has designed a secure and rugged cash-box facilitating collection and transportation by drop crews.

## Retail & Vending

An average currency acceptor processes more than 250 notes per day in retail environments. MEI's patented mechanics and optics ensure excellent acceptance, high security and peak throughput while storing quantities of cash. MEI CASHFLOW® SC note acceptors provide rapid note pickup and allow multiple notes to be processed in a very short period of time. The average transaction is less than 10 seconds for three to four notes.

## Parking & Transportation

Note acceptors enhance the payment options available and hence the overall experience of car park users. The MEI CASHFLOW® SC note acceptor offers an economical solution for pay-on-foot machines placed within multistorey car parks, convenience (hotel, hospital, university, shopping malls) and city parking environments. With unrivaled note acceptance, fast insertion rates, high-security design and ability to operate within semi- and fully protected environments, the MEI CASHFLOW® SC adds value to the customer parking experience, and hence directly impacts the profitability of the operation.
